CC This invention describes a novel preparation of an agent (A) for CC detection, prevention and/or treatment of microbial infection by: CC (1) identifying essential genes (I) and corresponding polypeptides (CC (II); (ii) identifying compounds that are directed against (II) and CC inactivate the microbe; (iii) testing these for suitability for use; and CC (iv) formulating selected (A). Identifying essential genes (I) comprises (CI) formulating selected (A). Identifying essential genes (I) comprises (II) products of the invention for survival of the deficient organisms (CC inhibition (CAI) and/or subtractive recombination mutagenesis (SRM), CC then determining viability and/or survival of the deficient organisms. CC be a nucleic acid (Ia), vector or host cell containing (Ia), derived (CC polypeptide (IIa), or fragments, (IIa) reparticularly used for diagnosis, CC fragments or an inhibitor of (IIa)) are particularly used for diagnosis, CC (Ia) and (IIa) are used in DNA, subunit or live vaccines. The method CC generals, so identified (A) should have a broad spectrum of activity. Many generate field (A) should have a broad spectrum of activity. Many conditions are used for screened quickly, in an automated process, and the identified genes can be used for screening without purification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches 202;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence

(I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC polynucleotides are also used in diagnostics as expressed sequence tags CC for identifying expressed genes. (I) is useful in gene therapy techniques CC (II). (II) is useful for generating antibodies against it, detecting or CC (II). (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as CC a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. CC diagnostics, forensics, gene mapping, Identification of mutations in CC diagnostics for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC amino acid sequences. ABG00010-ABG30377 represent novel human CC diagnostic amino acid sequences of the invention.

CC The polypeptide and sequences of the invention. On the printed CC specification, but was obtained in electronic format directly from WIPO at figure the printed control of the control of the control of the printed control of the control of the control of the printed control of the control of the printed control of the con

                                                                                                                                                                                                                                                                                                                           В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CC membrane protein having a terminal Phe residue.
CC membrane protein may be used in a vaccine to prevent or treat H. pylori CC infection or to identify H. pylori polypeptide binding compounds, CC useful as potential H. pylori life cycle activators or inhibitors. The CC useful as potential H. pylori life cycle activators or inhibitors. The CC PNA and probes derived from it may be used for the identification of CC H. pylori in a sample and the diagnosis of H. pylori infection. Nucleic CC acid sequences complementary to the DNA act as antisense sequences and CC against the protein can be used in immunoassays to evaluate the abundance CC and distribution of H. pylori-specific antigens. The genomic sequence of H. pylori (ATCC 55679) was determined from overlapping contigs generated CC by mechanically shearing the bacterial DNA. The sequences were analysed CC defined by computer evaluation. To identify likely H. pylori antigens for vaccine development, the amino acid sequences predicted from various ORF were analysed for significant homology to other known or exported conterest, particular regions can be isolated from H. pylori by PCR complification for recombinant solvepetide production. e.g. in E. coli

The vaccine contains at least one isolated H. pylori polypeptide, or its fragments, in a carrier, where the carrier is a Salmonella, vibrio cholerae or Shigella vector containing a nucleic acid encoding the H. pylori polypeptide. The vaccines induce humoral and cellular immune responses. The vaccines are used to treat or prevent infections by H. pylori. Sequences AAX75779 to AAX75837 represent nucleic acid sequences encoding H. pylori outer membrane polypeptides (OMPs) AAX17160 to AAX17218.

This claimed Helicobacter pylori polypeptide, designated GHPO 107, can be used in vaccination methods for preventing or treating Helicobacter infection. 85 Helicobacter polypeptides (see AAW71474-W71558) are claimed, as well as isolated polypucleotides (see AAV52009-93) that encode them. The invention also provides: methods for producing these Helicobacter polypeptides in recombinant host systems, and related expression cassettes, vector and transformed or transfected host cells; live vaccine vectors
                                                                                                                                                                                                                                                                                                                                                                                                                                         Al-Garawi

Nucleotide sequences were determined for the D15 genes (AAQ66198-202) and the corresponding as sequences were derived (AAR53754-58). D15 OMP can be produced easily and on a large scale, free of other antigens and lippoligosaccharides, by recombinant DNA methods using the isolated genes.

BASB027 agonists, antagonists and antibodies may be used to prevent and/or treat bacterial infections.
                                                                                                                                                                                                                                                                                       The present sequence is BASB027 polypeptide, which shows significant homology to Neisseria meningitidis OMP85 outer membrane protein. It is encoded by DNA obtained from chromosomal DNA library of Moraxella catarrhalis strain Mc2931 (ATCC 43617). BASB027 polynucleotide and polypeptide can be used for diagnosis and staging of disease, determining susceptibility to a disease and to prepare medicaments for treating M. catarrhalis infections, especially office media. The BASB027 DNA can be

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is BASB027 polypeptide, which shows significant homology to Neisseria meningitidis OMP85 outer membrane protein. It is encoded by DNA obtained from chromosomal DNA library of Moraxella catarrhalis strain Mc2931 (ATCC 43617). BASB027 polynucleotide and polypeptide can be used for diagnosis and staging of disease, determining susceptibility to a disease and to prepare medicaments for treating M. catarrhalis infections, especially othis media. The BASB027 DNA can be used as probe for screening of genetic mutations, serotype, taxonomic classification or identification. BASB027 agonists, antagonists and antibodies may be used to prevent and/or treat bacterial infections.

                                                                                                                            The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Outer membrane protein (OMP) D15 genes were isolated by screening chromosomal libraries of H. influenzae type b (Hib) strains Ca, Eagan and Minn A, and the non-typeable (NTHI) strains SB33 and PAK 12085. Nucleotide sequences were determined for the D15 genes (AAQ66198-202) and the corresponding as sequences were derived (AAR53754-58). D15 OMP can be produced easily and on a large scale free of other antigens and lipooligosaccharides, by recombinant DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Chong P,

Outer membrane protein (OMP) D15 genes were isolated by screening chromosomal libraries of H. influenzae type b (Hib) strains Ca, Eagan and Minn A, and the non-typeable (NTHi) strains SB33 and PAI 12085. Nucleotide sequences were determined for the D15 genes (AAQ66198-202) and the corresponding aa sequences were derived

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      (AAR53754–58). D15 OMP can be produced easily and on a large scale, free of other antigens and lipooligosaccharides, by recombinant DNA methods using the isolated genes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence

Outer membrane protein (OMP) D15 genes were isolated by screening chromosomal libraries of H. Influenzae type b (HLD) strains Ca, Eagan and Minn A, and the non-typeable (NTH1) strains SB33 and PAN 12085. Nucleotide sequences were determined for the D15 genes (AAQ66198-202) and the corresponding as sequences were derived (AAR53754-58). D15 OMP can be produced easily and on a large sce free of other antigens and lipooligosaccharides, by recombinant DN methods using the isolated genes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Nucleic acid encoding D15 outer membrane protein - esp

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               the bacterial cellulose synthase operon. The sequence given in AR45004 is the begining of an open reading frame overlapping the end of this operon. The bacterial cellulose synthase operon contains four genes, genes A-D. The operon sequence may be used in a transcription vector for the expression of the cellulose synthase operon to increase cellulose production in a recombinant microorganism. This system may be used as an important tool for exploring mechanisms of cellulose synthesis and for enhancing production of cellulose.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 망
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        뫄
a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                     polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical
                                                                                                                                                                                                                                                                                        The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The
                                                                                                                                                                                                                                                                                                                                                                                           Claim 20;
                                                                                                                                                                                                                                                                                                                                                                                                                                  New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      N-PSDB;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Drmanac RT,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            (HYSE-) HYSEQ INC.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Total number of hits satisfying chosen parameters:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Searched:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Scoring table:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Maximum
      Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     DB
